Direct Submission

Submitted (17-NOV-2001) Wellcome Trust Sanger Institute, F. Cambridgeshire, CB10 1SA, UK. B-mail enquiries: humquery@sanger.ac.uk Clone requests: clonerequest@sanger.on Nov 20, 2001 this sequence version replaced gi:16605765 During sequence assembly data is compared from overlapping. Where difference are found these are annotated as variation together with a note of the overlapping clone name. Note the variation annotation may not be found in the sequence submoorresponding to the overlapping clone, as we submit seque only a small overlap as described above.

This sequence was finished as follows unless otherwise not regions were either double-stranded or sequenced with an a chemistry or covered by high quality data (i.e., phred que 30); an attempt was made to resolve all sequencing problem as compressions and repeats, all regions were covered by a one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The followir abbreviations are used to associate primary accession numt in the feature table with their source databases: Em:, EME SWISSPROT; IT:, TREMBL; Wp:, WORMPEP; Information on the W database can be found at AL603707 234182 bp DNA linear ROD 17 Mouse DNA sequence from clone RP23-422L16 on chromosome 11 Eukaryota, Metazoa, Chordata, Craniata, Vertebrata, Eutele Mammalia, Eutheria, Rodentia, Sciurognathi, Muridae, Murir 1 (bases 1 to 234182) http://www.sanger.ac.uk/Projects/C\_elegans/wormpep RP23-42
from the RPCI-23 Mouse PAC Library constructed by the group of Pieter de Jong.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         781 with a phrap-derived quality score.

Sequencing vector: plasmid; n/4; 100% of reads
Sequencing vector: plasmid; n/4; 100% of reads
Chemistry: Dye-terminator Big Dye; 100% of reads
Assembly program: Phrap; version 0.990319
Consensus quality: 128169 bases at least Q40
Consensus quality: 128674 bases at least Q30
Consensus quality: 128972 bases at least Q30
Insert size: 150000; agarose-fp
Insert size: 129184; sum-of-contigs
Quality coverage: 10.78x in Q20 bases; sum-of-contig;
                                                                                                                                                                                                                                                                                                 The sequence data in this record represents an 'enhanced' version of a Phase 2 submission. Specifically, the indicat order and orientation of each sequence contigl has been established using one or more of the following: read-pair data from individual subclones, overlaps with neaghboring clones, alignment with available reference sequence (e.g., human), and/or confirmation by PCR testing. In addition, the sequence assembly is based on at least 8X average coverage in Q20 bases and has been reviewed to rule gross misassemblies, the low-quality ends of sequence
contigs have been trimmed away, and each base is associate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  is believed to be correct as given, however the sizes of the gaps between them are based on estimates that happrovided by the submitter.

This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

Direct Countises.

Submitted (10-MAY-2003) Human Genome Sequencing Center, Del of Molecular and Human Genetics, Baylor College of Medicinn Baylor Plaza, Houston, TX 77030, USA on May 10, 2003 this sequence version replaced gi:25008075 on May 10, 2003 this sequence version replaced gi:25008075 on May 10, 2003 this sequence version of BAC bases and whole genome shotgun sequencing reads assembled using, (http://www.hgsc.bem.tmc.edu/projects/rak/). Each contig din the feature table below represents a scaffold in the Atlassembly (a 'contig-scaffold'), Within each contig dindividual sequence contigs are ordered and oriented, and by sized gaps filled with Ns to the estimated size. The semmy extend beyond the ends of the clone and there may be sized gaps filled with Ns to the calinated size. The semmy extend beyond the ends of the clone and there may be sizence shotgun sequence reads. Both end sequences and whole shotgun sequence only contigs will be indicated in the fea
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Assembly program: Atlas 3.0;

/note="Vector: pt7f3D-pac (Pharmacia) with a modified polylinker; lst strand cDNA was prepared from mammary gland tissue from a lactating female, and was then primed with a Not I - oligo(dT) primer. Double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pf773 vector. Library is normalized. Library was constructed by Bento Soares and M. Fatima Bonaldo."

//note="Vector: pT7130-Pac (Pharmacia) with a modified
polylinker; Site_l: Not I; Site_2: Eco RI; UI-R-EPO is a
subtracted cDNA library constructed according to Bonaldo,
Lennon and Soares, Genome Research, 6:791-806, 1996. First
strand cDNA synthesis was primed with an oligo-dT primer
containing a Not I site. Double stranded cDNA was ligated
to an Eco R I adaptor digested with Not I, and cloned
directionally into pT773-Pac vector. The oligonucleotide
used to prime the synthesis of first-strand cDNA contains
a library tag sequence that is located between the Not I
site and the (dT)18 tail. The sequence tags for this
library are: distal colon, GAAGTGCTCC; osteoblast,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            3 687 bp mRNA linear EST 02-MAY-2002 00-coc-1-22-0-UI.sl UI-R-EPO Rattus norvegicus cDNA clone 0-coc-1-22-0-UI 3', mRNA sequence.

n describes isolated Tumor Necrosis Factor (TNF) family peptides: APO4, APO6, APO8 and APO9 or their active d'isolated TWP related ligands in and 3 (TNRL1 and TNRL3) or fragments. APO4 is useful for diagnosing prostate cancer by evels of APO4 is useful for diagnosing prostate cancer by APO4 selective binding agents linked to a therapeutic polypeptides are also useful for identifying selective solveptides are also useful for identifying selective solveptides are also useful for identifying selective solveptide/active fragment which is extracellular, or the cell surface. The binding is preferably performed in lypeptides/ active fragments are also useful for screening and antagonists by binding and observing the changer in APO4 ective pharmacological agente useful in diagnosis or disease are also identified using APO4 polypeptides/ active I APO4 signal transducer molecules that specifically interact asmic domain of APO4 and detecting a change in level of APO4 is method is performed in vivo or in vitro. APO polypeptides is anosis/treatment of developmental or gestational duced apoptosis

ã 24 ä The present sequence is that of cDNA clone DNA30879-1152 (ATCC 20 encoding human PRO207 (see AAY95338), which shows homology to ser members of the tumour necrosis factor family, especially human [ymphotoxin (23.4%). The CDNA was identified in a foetal kidney (library following identification of an expressed sequence tag will homology to human Apo-2 ligand. A claimed method for inhibiting (growth of a tumour call comprises exposing the tumor cell to PRO: PRO207, PRO30, PRO219, PRO221, PRO224, PRO328, PRO301, PRO526, PRO356, PRO356, PRO310, PRO219, PRO219, PRO224, PRO328, PRO311, PRO526, C polypeptides incorporating them. The tumour is especially a cance selected from breast, ovarian, renal, colorectal, uterine, prostic lung, bladder and central nervous system cancer, melanoma and len Nucleic acids encoding PRO179 etc. are used in the recombinant p:

The present sequence is that of a polynucleotide encoding a non-R member of the tumour necrosis factor (TMP) superfamily. The inven provides non-naturally-occurring proteins that contain one or more external surface loops of RANKL (see ABR42066-70) in combination terrorlogus protein core obtained from a non-RANKL member of the superfamily. Also provided are polynucleotides encoding such protein core obtained some superfamily. Also provided are polynucleotides encoding such protein bind to RANK, acting as mimics of RANKL. They can be obtained bone formation by either inhibiting bone resorption or in costeogenesis, thus providing treatment for diseases or conditions characterised by loss of bone mass
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New RANKL mimic comprising a core, and at least one external loop for enhancing processes of bone formation or inhibiting bone reso thus providing treatments for disease or condition characterized.

The present sequence is that of a polynucleotide encoding human. The invention relates to compositions comprising heterotrimeric of tumour necrosis factor (TNF) ligand family members, and their the detection, prevention and treatment of disease. In one embod the heterotrimeric complex comprises full-length or extracellular portions of TWEAK and full-length or extracellular portions of oligand family members, preferably VEGI or VEGI-SV. The heterotrim complexes of the invention are useful for treating an autoimmune cancer or osteoporosis, and particularly for inhibiting cancer or proliferation, increasing B cell proliferation, or inducing apop T cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New heteromultimeric complex having a first polypeptide member o tumor necrosis factor (TNF) ligand family, and a second differen of TNF ligand family, useful for treating cancer, osteoporosis o

The invention relates to an isolated nucleic acid molecule encoditumour necrosis factor family ligand. A composition comprising the isolated antibody or its fragment is used for treating an individual need of decreased level of endokine alpha activity. The endokine polypeptide present in a heterotrimeric complex is used for treat individual having a disorder associated with excessive bone resonerg. Osteoporosis, Paget's disease or arterial calcification. Treindividual having a disorder associated with insufficient bone recomprises administering an endokine alpha antagonist, which is the antibody that binds specifically to endokine alpha antagonist, which is the present sequence represents a cDNA encoding a tumour necrosis fac

a variety of human tissue sources and which encode novel secrete proteins. The polynucleotides can be used as probes for the identification and isolation of full length cDNA and genomic DNA polynucleotides and proteins can also be used as nutritional sup. The proteins are useful in the treatment of various immune defice and disorders such as viral infections, bacterial infections, fur. infections, autoimmune thyroiditis and diabetes) and allergic read and conditions (e.g. asthma). They are also useful for treating concodencerative diseases (e.g. Alzheimer's disease, Parkinson' disease), liver fibrosis, coagulation disease) and tumours. They useful for tissue regeneration, for wound healing and in the tree burns, incisions and ulcers, the proteins are also useful for resting cuseful for tissue regeneration, for wound healing and in the tree burns, incisions and ulcers. The proteins are also useful for rehamenatopolsesis and cortering myeloid or lymphoid cell deficie Sequences ABK34863-ABK35454 represent polymucleotides of the inv The invention relates to 592 polynucleotides which have been der

The sequence is that encoding human tumour necrosis factor related (TRELL). TRELL or active fragments can be included with a carrier pharmaceutical compositions to treat cancer, autoimmune diseases immune responses to tissue grafts, or to stimulate or suppress the system. It is useful to screen for TRELL receptors, by labelling v detectable label and screening compositions for binding. Agents interfering with TRELL-receptor binding can also be screened for then be administered, optionally with interferon- gamma, to induce death or treat, suppress or alter immune responses (especially inhuman adenocarcinoma cells) involving a signal pathway between TRI its receptor. The DNA sequence can be used in gene therapy for TRI related disorders in mammals (especially humans), e.g. tumours,
